CORE SYNFUELS · CONSULTING & INDUSTRIAL SOLUTIONS

Projects that connect opportunities.

We structure projects, connect capabilities, and develop solutions to turn technical and commercial challenges into executable opportunities.

01 / OUR PLATFORM

Industrial solutions with an international vision.

A consulting platform bringing together strategy, technical capabilities, and technology to develop responsible, competitive, and scalable projects.

01

Purpose

Connect resources, knowledge, and technology to enable new opportunities for industrial development and responsible use of materials and energy.

02

Mission

Design, structure, and execute consulting and project development solutions across energy, hydrocarbons, minerals, recycling, technology, and manufacturing, bringing together strategic partners, technical expertise, and business models that create economic and operational value while respecting environmental and social responsibilities.

03

Vision

Become an international industrial-solutions platform recognized for turning complex opportunities into competitive, safe, technologically sound, and replicable projects, supporting the advancement of the productive sectors in which we operate.

BRAND PROMISE

Strategic clarity. Capability integration. Technical and financial assessment. Execution discipline.

An identity built on sound business foundations, engineering, industrial evolution, and global collaboration.

02 / CORPORATE ARCHITECTURE

Seven business lines. One shared vision.

Every opportunity calls for a tailored solution. Core Synfuels supports project evaluation, structuring, and management, connecting technology, specialists, partners, and business insight to enable informed decisions and disciplined execution.

insight to enable informed decisions and disciplined execution.

01 / ENERGY

↗

Energy

Planning an energy initiative? We can help define the strategy, assess technical and economic feasibility, structure a development model, and integrate specialists and technology. We support planning, stage coordination, and risk oversight so your initiative can advance with clear goals, accountability, and measurable milestones.

02 / OIL & GAS

Oil & Gas

We can support your Oil & Gas initiative from concept through execution readiness: opportunity assessment, scope definition, commercial and contractual structuring, infrastructure planning, and cross-disciplinary coordination. Our approach incorporates industrial safety, applicable compliance, budgets, schedules, and risk management.

View presentation →

03 / MINERALS

Minerals

A mining venture needs an integrated view of resources, operations, and markets. We can assist with preliminary evaluation, technical and commercial structuring, extraction and processing plans, logistics and distribution strategies, and stakeholder coordination while considering safety, applicable permits, costs, and environmental responsibility.

04 / RECYCLING

↻

Recycling

Looking to turn recoverable materials or waste streams into a business opportunity? We can help analyze supply, assess technology options, design a value-recovery model, and structure the project. We integrate traceability, operations, logistics, market considerations, and environmental compliance into a viable and scalable circularity strategy.

Discuss scope →

05 / TECHNOLOGY

⌘

Technology

We turn a technology proposition into an assessable development roadmap: industrial application studies, partner identification, pilot and testing plans, technical and commercial risk reviews, and technology transfer or implementation agreements. Our objective is to support informed decisions before scaling investments.

Discuss scope →

06 / MANUFACTURING

▤

Manufacturing

We can help plan or modernize your manufacturing operation through needs assessments, facility and equipment scope definition, capacity analysis, supplier integration, and productivity strategies. We align technical, financial, supply-chain, and execution requirements to build a better-structured industrial project.

Discuss scope →

07 / PROJECT SOLUTIONS

Project Solutions

When an opportunity spans multiple disciplines, we support integrated structuring: feasibility studies, business modeling, budget estimates and controls, master scheduling, risk identification, partnerships, contracts, and project governance. We help promoters, investors, and executive teams make decisions and track milestones with greater clarity.

03 / VISUAL LIBRARY

Solutions you can see. Projects you can understand.

Explore practical applications of our ability to structure, coordinate, and lead projects. Each visual highlights challenges we can address and how we bring technical clarity, management control, and a development roadmap. Select an image to view it at full size.

Energy

What can we do for your project? Evaluate energy opportunities, integrate technology and specialists, prepare investment models, and coordinate planning, safety, and implementation.

Oil & Gas

We support hydrocarbon initiatives with feasibility assessment, multidisciplinary planning, risk management, resource coordination, and safety and compliance considerations.

Infrastructure

From early concept through construction coordination, we help define scope, integrate teams, control budgets and schedules, and manage infrastructure-project risks.

Healthcare infrastructure

We support healthcare infrastructure through planning, specialist coordination, cost oversight, and review of technical and regulatory requirements.

Principles guiding every decision.

Core Synfuels positions itself as a highly competitive partner for industrial projects requiring reliability, technical vision, and business discipline. Our value proposition goes beyond advice: we seek to integrate capabilities, anticipate risks, and support decisions that create verifiable value.

01

Integrity

We safeguard the trust behind your investment through clear conditions, transparent decisions, responsible information handling, and attention to potential conflicts of interest.

02

Safety

We integrate safety from the planning stage to protect people, facilities, and operational continuity rather than prioritize short-term targets.

03

Technical rigor

We support better-grounded decisions with documented assumptions, technical and financial analysis, cost reviews, and explicit assessment of risks and uncertainties.

04

Responsible sustainability

We incorporate environmental and social considerations into project development, emphasizing traceability, compliance, and improvements that can be measured and demonstrated.
